

Cleaning Plastic

- · Routine cleaning should be performed with a soft, wet cloth.
- Stubborn dirt and grease can be removed with a mild cleaning solution (we recommend "Simple Green" or "DoAll") and a cloth or SOFT bristled brush.
- Graffiti can usually be removed with industrial "Graffiti Remover". Make sure to test
 in an inconspicuous area, as some of these products can damage the plastic surface
 or cause a haze.
- DO NOT use abrasive pads (ScotchBrite type or steel wool) or abrasive cleansers. They will leave scratch marks in the plastic.

Cleaning Stainless Steel Components

- · DO NOT use abrasive cleaners or cleaners containing bleach.
- · Use only soft cloth, sponge, fibrous brushes, plastic or stainless steel pads.
- · Rinse thoroughly with fresh water after every cleaning operation.
- · Always wipe dry to avoid water marks.
- WD-40 may be used to protect hinges and fasteners from exposure to water, chlorine and salt air.

Repairing Scratches

- Small scratches can be smoothed out by pushing the raised material down with the back of a spoon or a blunt screwdriver.
- Small scratches ("marred" areas) can be reduced by lightly passing the flame from an acetylene torch over the area. This must be done quickly and at a distance of about 6 inches to avoid melting the plastic.

Replacing Old Style Number Plates

- · Numbers plates can be pried out with a thin file or knife and reused.
- New number plates (HW0011) can also be purchased directly thru the following company:

E.R. Perry Signs & Engraving LLC 218-387-9479 signs@erperry.com

Replacing New Style (metal hinge) Locker Doors

- 1. Remove the screws that secure the door to the hinge (there are screws on the face and edge of the door). The screws are T-20 security-type torx head.
- Remove the damaged door. Attach the face of the door to the hinge with screws in predrilled holes. Do not tighten screws all the way at this point.
- 3. Drill 3/8"-1/2" deep pilot holes for screws in edge of the door with 7/64" drill bit. Use holes in hinge as a guide and make sure to keep the drill parallel to the face of the door. Insert screws and tighten completely.
- 4. Go back and completely tighten screws on face of door.
